| PhD Research | Aug 2019 - May 2026 |
| <ul style="list-style-type: none"> • Developed a stochastic weather generator in Python for statistically generating new realizations of precipitation and temperature from historical observations and regional CMIP6 downscaled projections • Integrated weather generator into a regional hydrologic/agricultural consumptive use model to explore plausible agricultural risks and sensitivities of users and crops to climate in an institutionally complex river basin in the American west • Constructed an exploratory geophysical model in MATLAB for investigating how Earth's internal and external water reservoirs affect its thermal history and confine the Earth's total water budget through the non-classical feedback of variable regassing efficiency • Optimized, parallelized, validated, and visualized experiment design for high dimensional climate models to improve and inform agricultural decision-making, and geophysical models to understand how new feedbacks in coupled mantle temperature-water models impact Earth's thermal evolution | |
| Atmospheric Chemistry Researcher, Full-Time | Jun 2015 - Aug 2019 |
| <ul style="list-style-type: none"> • Led fieldwork as primary operator of Airborne Tropospheric Hydrogen Oxides Sensor and OH reactivity instrument across one international intercomparison study (SAPHIR OHR Intercomparison) and two NASA-led airborne research campaigns (KORUS-AQ and ATom) • Collected, processed, and analyzed <i>in situ</i> measurements using bespoke MATLAB software for over 600+ flight-research hours across all seven continents | |
